Getting teeth into Clinical Decision Support for integrated NCD management

Clinical Decision Support (CDS) systems offer unique potential for improving chronic care. Type 2 diabetes, cardiovascular and dental diseases are the three most expensive diseases in the EU. However, as recently highlighted by WHO and The Lancet, the intrinsic links between oral and general health have often been neglected. This talk will provide insights into the chances and challenges involved in the development of a prototypic CDS system for integrated management of NCDs at the interface of medical and oral health care.

Stefan Listl

Professor/Chair in Quality and Safety of Oral Health Care
(Radboud University Medical Center, The Netherlands)

Head of Section - Translational Health Economics
UK Heidelberg, Department of Dentistry

Host

Prof. Dr. Benjamin Meder, University Hospital Heidelberg
